## OBJECTIVE

---

Backend Developer with over two years of hands-on experience in API and web applications development, seeking full-time Backend Developer roles in Berlin. Specializing in Python, I am driven by a passion for leveraging cutting-edge technology to deliver tailored software solutions that address the unique needs of businesses.

## EXPERIENCE

---

### Linkacode

February 2024

Co-Founder & Backend Engineer

*Argentina*

- Linkacode is a side project that I coordinate together with colleagues in which we offer cutting-edge software solutions. My main tasks are to lead and execute the projects following the appropriate methodologies.
- The last project in which I was part of the development team was the creation and implementation of an API for one of the most important technological universities in Argentina.
- We improve the productivity of students, professors and university workers thanks to our software. We increased student use of the website by 25% thanks to our API that facilitates quick access to each student's class schedule.
- The technologies I used and implemented were: Python, Django & Django Rest, PostgreSQL, Linux, Git, Trello.

### UTN Haedo

Sep 2023 - Feb 2024

Full Stack Developer

*Buenos Aires, Argentina*

- I developed plugins and web components that helped increase the productivity of the workers using the website.
- I helped the development team considerably in the refactoring of the website code.
- Actively participate in meetings and discussions with the development team to plan new projects and improve current ones.
- The technologies I used and implemented were: JavaScript, Python, Wordpress, MySQL, HTML, CSS.

### Costa Rio Parana

Dec 2022 - Ago 2023

Backend Developer

*Parana, Argentina*

- Developed comprehensive solutions as a Backend Developer, utilizing Python, Django, MySQL and deploying servers with Nginx on Linux environments.
- Led the technical implementation of automations, ensuring efficiency and compliance with functional and non-functional requirements.

## PROJECTS

---

### MarathonMaster, SaaS

July 2024

I am working on a robust API in order to create a SaaS designed for sporting event organizers and their respective users. This online platform offers a wide range of solutions for both end users and customers of the service. Stack: Python, Django-REST, PostgreSQL, Docker, Linux.

## EDUCATION

---

### Computer Science Technician Degree, TECLAB Institute

2021 - 2023

Relevant Coursework: C++, Python, Mathematics, Engineering Projects, Algorithms, Data Structures, Data Bases.

## SKILLS

---
